DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 and 16-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Williams, of record. As discussed in the prior office actions, Williams discloses the formation of a high voltage pull-up transistor array, formed on an epitaxial layer, with a buried layer between the substrate and the epitaxial layer, and where various source/drain regions are shared between devices. See, for example, the configurations shown in FIGS 2B, 9B, 25O, etc. In addition, Williams teaches that vertical and lateral type devices may be employed. See, for example, the discussion at col. 3, l. 55-70. Williams also shows various configurations where a source/drain region surrounds one of the adjacent regions, and where all electrodes may be formed on the same surface of the device. See, for example, FIGS. 2, 5, 23, 25O.

The use of alternate conductivity types for the source, drain and substrate regions would also be an obvious design variant within the scope of the Williams reference, as would varying the specific number of devices in the array.

Allowable Subject Matter

Claims 4-15 are allowed.
